Esclusione rete 2534

Observe that, because 2 and 3 are the vertices of a biangle, the vertices 3, 6, 1, and 2 are on the same equator γ. We draw a picture of the net in the half sphere which excludes the biangle and is cut in two equal squares by γ

We also draw the location of the pin P.

Join O and 6 with the geodesic segment which is on the equator &

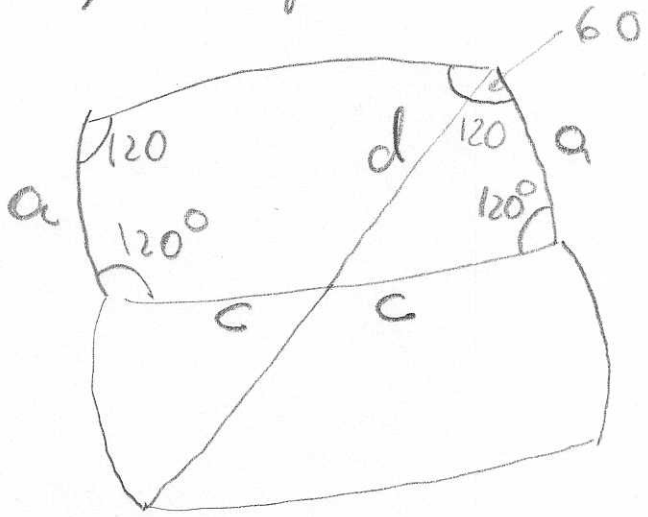

The triangles 15A and 60A have three equal angles and are therefore congruent.

So looking at the two geodesiclateals P506 and 4015 we have:

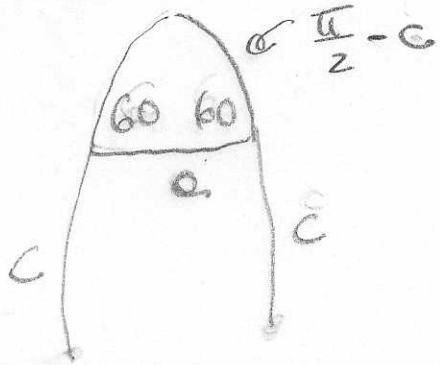

a) the edge in 50 in common
b) the edges 60 and 15 congruent
c) the angles in 0 and 5 equal
d) the anglesin 6 and 1 equal

The two quadrilaterals are thus congruent.

Moreover they are determined by the fact that the bisector of one angle cuts the edge in 2 equal parts

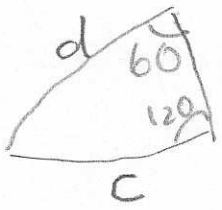

Now let us use Todhunter formulas

$$\tan\left(\frac{\pi}{2}-c\right)=\frac{\cos 0}{\cos 60}\tan\frac{a}{2}$$

$$\tan\left(\frac{\pi}{2}-c\right)=2\tan\frac{a}{2} \quad (1)$$

$$\tan\frac{d+c}{2} = \frac{\cos 30}{\cos 90}\tan\frac{a}{2}$$

$$\Rightarrow \frac{d+c}{2} = \frac{\pi}{2}$$

$$\tan\frac{c-d}{2} = \frac{\sin 30}{\sin 90}\tan\frac{a}{2}$$

$$= \frac{1}{2}\tan\frac{a}{2}$$

$$\tan\left(c-\frac{\pi}{2}\right) = \frac{1}{2}\tan\frac{a}{2} \qquad (2)$$

(1) and (2) are not compatible
